

Flooring Problems ?

Flooring problems are today one of the most serious and costly of issues faced by designers, owners, installers and constructors. Such problems have escalated in recent years and now are estimated to exceed a billion dollars each year in this country.

Whether you have already experienced a problem or are seeking to avoid one, a knowledgeable, thorough review and analysis of your floor or flooring project is invaluable.

We at **Concrete Constructives** have over 37 years experience dealing with concrete challenges and have in the past 15 years alone consulted on or investigated over 300 major flooring issues from coast to coast.

Don't let a flooring problem get the best of you or your project.
